1.0 Introduction

1.1 Port Background

The Port of Oakland (Port) was created in 1927 as an autonomous department of the City of Oakland (City), under the exclusive control and management of the Board of Port Commissioners (Board) by an amendment to the City's charter. As an independent department of the City, the Port manages property stretching along 20 miles of the eastern shoreline of San Francisco Bay, managing approximately 5,100 acres of land.

The Port is split into three revenue divisions: Maritime, Commercial Real Estate (CRE), and Aviation (Figure 1-1). The Aviation Division is responsible for managing, developing, and operating activities at the Oakland International Airport (OAK) in support of commercial airlines services, air cargo operations, and general aviation. The Airport is informally divided into two operational areas, South Field and North Field. The Maritime Division is responsible for managing, promoting, developing, and maintaining the seaport facilities on the Oakland Outer Harbor, Middle Harbor, and Inner Harbor, which consist of marine container terminals, intermodal rail terminals, logistics warehouses, and other ancillary maritime support services. The CRE Division is responsible for managing, promoting, and overseeing area along the Oakland waterfront. The centerpiece of the CRE is Jack London Square, which consists of hotels, restaurants, offices, retail shops, public parking, marinas, as well as public open space. The CRE portfolio also includes the Airport Business Park located near OAK.

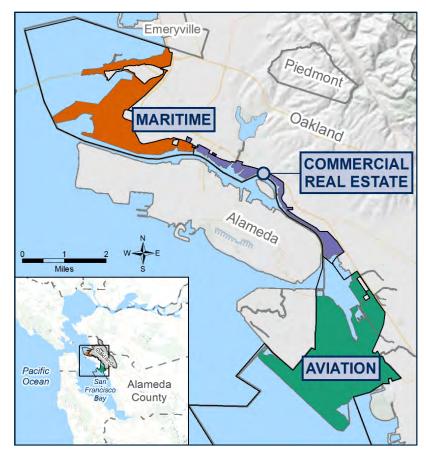

Figure 1-1 Port of Oakland Location Map

The Port owns and maintains a sanitary sewer collection system which consists of lateral pipes, gravity mains, manholes, cleanouts, lift stations, oil/water separators, and other sewer appurtenances that collect and convey sewage to the City of Oakland's collection system which then discharges to East Bay Municipal Utility District's (EBMUD) large-diameter interceptor systems. All sewage is treated at the EBMUD Main Wastewater Treatment Plant located in West Oakland.

1.2 Regulatory Background

With the goal of improving water quality in the San Francisco Bay, in 2009 the United States Environmental Protection Agency (EPA) ordered EBMUD to reduce Sanitary Sewer Overflows (SSOs), which is primarily accomplished by reducing inflow and infiltration (I/I) to the system. EBMUD then passed Ordinance No. 353-10 in February 2010 to comply with the order, followed by the City of Oakland Passing Ordinance No. 13026 and 13080 (the City PSL Ordinance) in July 2011. The City PSL Ordinance requires that all PSL meet the EBMUD Compliance Standard and be certified as leak-free when either there is a change in property title, a project on the property costing \$100,000 or more, or a change in water service.

To be protective of local receiving waters and the environment, the Port passed Ordinance 4474 on May 10, 2018 to set a path for all Port Controlled Sewer Assets to also meet the EMBUD Compliance Standard and ensure Port assets are not contributing to SSOs (Appendix E). Port Controlled Sewer Assets are defined as sewer assets on Port Controlled Property, which is defined as all properties owned by the Port, except those that are within a Leasehold Property and serve only one tenant (see Appendix A for maps of Port owned property, and Appendix D for maps of Port Controlled Sewer Assets)¹. Ordinance 4474 specifically required the Port to prepare a Condition Assessment Plan (CAP) to document a feasible plan for bringing all Port Control Sewer Assets up to the Compliance Standard. During the CAP, all Port Sewer assets were mapped and documented, responsibility was assigned, and a schedule was established for all sewer assets to be inspected and assessed for required corrective actions.

Additional regulatory background can be found in the CAP, including information on the EBMUD PSL Ordinance, the City of Oakland PSL Ordinance, and the Port PSL Ordinance. Table 1-1 below summarizes the regulatory milestone dates in Port PSL Ordinance 4474 and the CAP.

Table 1-1. Summary of Regulatory Milestone Dates

Milestone	Date
Condition Assessment Plan (CAP)	November 20, 2019 (Completed)
Corrective Action Work Plan (CAWP)	June 30, 2023
Corrective Action Completed By	December 31, 2036

-

¹ As seen in Appendix A, the Port does not own all properties within the Port Jurisdictional Area. Properties within the Port Jurisdictional Area and owned by another entity fall under the City PSL Ordinance.

1.3 Corrective Action Work Plan Objectives

This Corrective Action Work Plan (CAWP) builds on the work done in the CAP and describes the work required to bring all Port Controlled Sewer Assets up to EBMUD Compliance Standards. The CAWP describes the current work the Port is doing to accomplish this goal, along with quantities and a schedule of work for remaining sewer assets. During the previous few years, the Port has undertaken a process to bring not just Port Controlled Sewer Assets into compliance, but also many of the sewer assets that are the responsibility of Port leasehold owners. Most corrective actions are scheduled to be completed by the year 2027, with a goal to bring the remaining sewer assets into compliance by the year 2036. EBMUD PSL Ordinance, a CAWP shall,

- (i) Summarize results of the condition assessment of all pipes required to be included in the Condition Assessment Plan (e.g., CCTV or pressure testing results);
- (ii) Identify and describe the location, length, and material of all sewer lateral pipes which require repair or replacement to meet the standards of this Regional Ordinance;
- (iii) Describe the type of work to be performed to bring the pipe into EBMUD Compliance Standards as defined in Section 5 of the EBMUD PSL Ordinance:
- (iv) Include a schedule for completion of listed tasks; and
- (v) Include a bid price or contractor's estimate for the required work.²

Port Ordinance 4474 confirms that all port tenants must comply with the City PSL Ordinance and have equivalent responsibilities as Property Owners as defined in the EBMUD Ordinance. The Port is not defined as a Property Owner under the EBMUD Ordinance, and is instead defined as a Public Entity. Therefore, the Port can establish a self-certification process equivalent to the EBMUD certification process. The Port maintains Testing Gravity Flow Pipelines guidelines to ensure all Port staff and contractors properly test all gravity pipelines and manholes. The Port tracks these self-certifications, which expire after 20 years, consistent with the EBMUD certificate duration. After expiration for any certificate of Port Controlled Sewer Assets, the Port will need to obtain a new self-certification.

1.4 Leaseholder Private Sewer Lateral Requirements

PSL, as defined in the EBMUD Regional PSL Ordinance Section 4, is a pipe or pipes and appurtenances that carries sewage or liquid waste from the structure(s) served to the sewer main, whether the structure(s) is or are publicly or privately owned. A PSL is associated with a parcel if it, or any portion of it, is located upon the parcel or conveys sewage and liquid waste from any structure located on that parcel. More than one PSL may be associated with an individual parcel.

The Port is situated within the City of Oakland and therefore the City of Oakland Planning and Building Department administers and enforces a PSL program in compliance with its Municipal and Planning Codes and PSL Ordinance. Port leaseholders work directly through the City to obtain the necessary PSL permit approvals. Port leaseholders' PSL compliance is triggered by permits and

_

² Port Ordinance 4474 does not specify that the Port's CAWP must be consistent with EBMUD's guidelines for a corrective action work plan. Cost estimates are not listed in Port Ordinance 4474, and therefore are not required, but approximate costs are provided in Section 3.3 for sewer work planned through 2027.

approvals required by the City and is administered by EBMUD. Additional information and guidance relating to EBMUD's requirements which Port tenants must comply with is available on the EBMUD website at: http://www.eastbaypsl.com/eastbaypsl/.

1.5 Definition of Port Controlled Sewer Asset

As defined in the CAP, "Port Controlled Sewer Asset" refers to a sewer pipe or series of sewer pipes located on properties owned by the Port, except for PSL Pipes, as defined in Section 1.4 above, and any other sewer laterals that are deemed to be the responsibility of a Port tenant through leasehold agreement. The Port is responsible for inspection, maintenance, and repair of Port Controlled Sewer Assets.

There are many different types of leases among the Port of Oakland's three revenue divisions. The lease usually precedes the adoption of the PSL Ordinance due to the contractual nature of the document. The terms and conditions in the lease may impact the following:

- (i) whether a tenant will trigger the obligations under the Port's PSL Ordinance;
- (ii) whether the Port consider a particular PSL Pipe part of Port Controlled Sewer Asset and subsequently include it in the Port's CAWP;
- (iii) whether a particular PSL Pipe shared by more than one tenant is the responsibility of a tenant and would not be considered a Port Controlled Sewer Asset.

The determination of tenant responsibility for a particular PSL Pipe requires a case-by-case review of individual leasehold agreements by the Port and may result in changes to the list of the Port Controlled Sewer Assets included in this CAWP.

1.6 Large Leasehold Owners

The PSL Ordinances require that all Property Owners that have more than 1,000 feet of PSLs submit a CAP within one year of a triggering event and a CAWP within 6 years of the triggering event. The Port identifies these tenants as Large Leasehold Owners³. The Large Leasehold Owners are to submit their CAP and CAWP to EBMUD for approval with a copy sent to the Port's Director of Engineering. It is the responsibility of the Large Leasehold Owners to submit these documents. The tenants which are considered Large Leasehold Owners is subject to change as sewer assets are built or abandoned, leaseholders or leaseholder areas change. Forcemains do not contribute to the total length of pipe when considering which tenants are Large Leasehold Owners. The current list of Large Leasehold Owners in the Port's three revenue divisions is the following:

Aviation

- Consolidated Rent-A-Car Facility
- FedEx Corporation
- Rental Car Service/QTA
- Signature Flight Support

³ See OMC Section 13.08.600(E) and Port PSL Ordinance Section 3

Maritime

- BNSF Railway (JIT)
- CenterPoint Properties (Seaport Logistics Complex)
- CoolPort Oakland LLC
- Everport Terminal Services, Inc (Ben E. Nutter Terminal)
- SSA (Oakland International Container Terminal)
- SSA (Matson Terminal)
- TraPac Terminal

Commercial Real Estate (CRE)

- CIM Group
- East Bay Regional Parks District
- Hilton Hotels Corporation dba Airport Hilton
- Oakland Hospitality LLC

2.0 Methodology

2.1 Summary of Data Reviewed

A data request was sent to the Port at the beginning of the project. The information requested included a summary of tenant leases, on-going and planned sanitary sewer work, as-built drawings of previous sewer work, and all existing Geographic Information Systems (GIS) layers relating to the Port and the sanitary sewer network. Data and information reviewed for this project is listed below in Table 2-1. EBMUD's Regional PSL Program Administrator was contacted to obtain the latest CAWP spreadsheet template and a table of all PSL Certificates that have been issued within the City of Oakland since the start of PSL program. Table 2-1 summarizes all the GIS data received and used to consolidate information for this CAWP.

Table 2-1. Summary of GIS Data Reviewed

Data Set	Data Type	Description	Source
20190703_GISDeliverable	GIS Data, Map Packages	Compiled for the 2019 Condition Assessment Plan (CAP) and highest quality GIS dataset covering all Port areas. Built on and replaces the original PortView enterprise geodatabase. Geometry was corrected with GPS in 2018 for most Port sanitary assets.	Mott MacDonald
20221021 - WebMap Export for Port	GIS Data	Compiled during work done during Basis of Design Reports in Maritime area. Based on PortView enterprise geodatabase and corrected based on field data.	Schaaf & Wheeler, West Yost
Shapefiles associated with Technical Memorandum – Sanitary Sewer Collection	2 shapefiles (manholes, pipes),	Manholes and cleanouts covering all Port areas, and pipes covering airport.	West Yost
System Condition Assessment Program, Oakland International Airport	Associated spreadsheet		
Port of Oakland AGO_Priorities	GIS Data, map package, spreadsheets	Updated CRE lateral data with condition	Black & Veatch
POAK_07_MB_Sites	GIS Data, map package	Compiled during work done during Basis of Design Reports in Maritime area. Based on PortView enterprise geodatabase and corrected based on field data.	Schaaf & Wheeler, West Yost

Data received regarding ongoing and planned sewer work, and as-built drawings that were received and reviewed in preparation of this CAWP includes the following:

Commercial Real Estate

 Sanitary Sewer Pipelines at Commercial Real Estate Areas – CCTV Inspection and Preliminary Assessment (Black & Veatch, June 2022)

2.2 Project Workflow

An initial step was to consolidate the GIS layers and attributes into one master GIS geodatabase. The GIS data created for the CAP was split into three geodatabases, one for each Port revenue area. These were merged into one Port-wide geodatabase. All linear features (e.g., sewer mains, sewer laterals, forcemains) were merged into one geodatabase layer, *ssCollectionSystem*. All point features (e.g., manholes, cleanouts, lift stations) were similarly merged into a single geodatabase layer, *ssStructures*. Consolidating the GIS layers allows for easier data analysis and consistency in attributes among feature types.

Existing GIS layers often had custom fields created for the purpose of the specific project that they were created for. This may include data related to sewer inspection results, current condition, maintenance recommendations, rehabilitation recommendations, ownership, and maintenance responsibility. The GIS data were further organized by consolidating duplicate attributes from the various datasets, removing unused attributes, and reorganizing attribute order. Care was taken so that any potentially valuable data related to the CAWP remained in the final geodatabase layers.

While consolidating the various GIS layers into a single geodatabase, it was clear that different GIS sources had more accurate and complete data in different Port areas. Care was taken to keep the most accurate, current, and complete data for each area. If the existence of a pipe was unknown, it was kept in the data. Photos taken during the CAP data collection and aerial photos freely available in GIS software were used to confirm spatial accuracy if there was a discrepancy between GIS sources. GPS data and associated photos collected in 2018 during the creation of the CAP were usually assumed to be correct. More recent data such as the Basis of Design Reports and engineering plans were also assumed to be more accurate. The Port has a long history of tenant upgrades that have not always been communicated back to the Port, leading to many unknown sewer assets. The CAP and the subsequent sewer inspections have resulted a great deal of increased completeness and accuracy in the GIS data. However, there remains some gaps in the data or assumed alignments. This is often due to inaccessibility or the inability to perform the Closed-Circuit Television (CCTV) inspection along the full length of pipe. As sewer assets are cleaned and rehabilitated, additional inspections will be required that will further improve the accuracy of the GIS data.

After the GIS data was consolidated, the Basis of Design Reports (BODRs) and other data listed above in Section 2.1 were used to further attribute the GIS data to provide the most recent inspection results and recommendations for each pipe. The BODRs include CCTV inspection results, comments, and recommendations for rehabilitation and repair for most Port Controlled Sewer Assets. All relevant tabular data from the BODRs were brought into the GIS data and added to the attribute tables. The maps in the BODRs were then compared against the GIS to ensure that the data matched. For other reports and engineering drawings, a visual comparison was made between the GIS and the data to verify the status of each sewer asset and make any modifications as necessary.

GIS attributes were added to be consistent with the EBMUD CAWP template spreadsheet, including attributes for type of work needed, PSL responsibility, method of rehab/replacement needed, date of expected PSL ordinance compliance, and factors that may affect rehab/replacement schedule. Much of the PSL responsibility already existed in the CAP GIS data, and the other data was largely in the BODRs. Any sewer assets that did not already contain PSL responsibility were attributed with the Port or Leasehold Owner name responsible for that asset.

The ssCollectionSystem GIS layer was then exported to Microsoft Excel format for further analysis. Various GIS attributes added by consultants that were used to track sewer inspection, condition, and rehabilitation information were used to establish the status and planned action for each pipe segment. Through progressive filtering and sorting of the data, the CAWP template was populated with information regarding which assets still required an inspection, corrective actions, were ready for a pressure test to become certified, or were already certified. The specific type of corrective action recommended in the BODRs have been generalized in the CAWP, but the original recommendations have been retained in the GIS. These include rehabilitation and replacement actions such as spot repair, open cut replacement, slip-lining, cured-in-place pipe (CIPP), pipe bursting, and manhole installation.

The Capital Improvement Project (CIP) schedule, available in the fiscal year 2021-22 Annual Report, was used to populate the dates for corrective actions on sewer assets that are included in the BODRs and are part of active plans. For all Port Controlled Sewer Assets not addressed by an active plan, the Port has set a deadline of addressing these assets by 2036 to provide the Port enough time to inspect, plan and carry out any corrective actions, and complete the self-certification process. For any pipes that are leaseholder responsibility and not addressed in any active plans, the schedule was set to either "Refer to tenant's CAWP" for Large Leasehold Owners, or "Schedule for rehabilitation will commence when there is a triggering event" for any Small Leasehold Owners. The current goal is to self-certify all Port Controlled Sewer Assets by 2030, six years prior to the 2036 deadline.

Pipes that are scheduled for repairs, rehabilitation, or replacement will be pressure tested at that time in accordance with Port guidelines and will be self-certified at that time. Therefore, the Port does not consider there to be a difference between the time the corrective action is completed, and the sewer asset is self-certified. The CAWP data is presented in Appendix B, the Schedule in Appendix C, and maps of the sewer network in Appendix D.

3.0 Corrective Action Work Plan (CAWP)

3.1 Summary

The total inventory of mapped sanitary sewer lines within Port owned lands across all three Port revenue areas has been analyzed and updated during the preparation of this CAWP. Appendix B contains each pipe segment currently in GIS, listing responsibility (Port or leasehold owner), size, material, and planned rehab action. Appendix D contains maps showing all pipes in the GIS symbolized by the CAWP pipe status (i.e., corrective action required, inspection required, no action required, abandon, or only test required). The maps in Appendix D also include some pipes that are not within the jurisdiction of the Port, primarily the City of Oakland and EBMUD. Appendix D also includes forcemains, which are not included in the CAWP because they do not contribute to I/I.

Table 3-1 summarizes the lengths and percentage of pipes for all Port Controlled Sewer Assets. 10.1% of current pipes are planned to be abandoned, 10.3% need an initial inspection, 38.4% require a corrective action (repair, replacement, or rehabilitation), 27.7% are in good condition and only require a pressure test for self-certification, and 13.5% have already been certified and require no further action. Table 3-2 provides the same summary for Large Leasehold Owners, Table 3-3 for Small Leasehold Owners, and Table 3-4 for sanitary sewer assets with shared responsibility between the Port and a leasehold owner. The Port is only responsible for the sewer assets in Table 3-1 and Table 3-4 but has taken the initiative to add many leasehold owner sewer assets to the active plans to bring most sewer assets on Port Controlled Property up to Compliance Standards. The only leasehold owner area that the Port has not included in an active plan is the area leased by FedEx Corporation.

The Abandonments and other Correction Actions are planned to be completed by the Port by the year 2029. Many other pipes have been inspected with no issues identified, and will undergo the self-certification test during this same timeframe. Abandonment is also considered a Corrective Action by the Port, but was separated from the other categories of Corrective Actions (repair, replacement, or rehabilitation) for the purposes of mapping in Appendix D to make it clear which pipes will not be connected to system any longer and therefore will not require self-certification. The CAWP does not include forcemains since the Ordinances only covers gravity lines. Other sewer assets such as manholes, cleanouts, and oil/water separators are not specifically mentioned in this CAWP because corrective actions and self-certification will occur on these assets as the connecting sewer lines are self-certified.

 Table 3-1.
 Summary of Port Control Sewer Assets

			Action

3.2 Schedule and Implementations

The Port has aggressively inspected and is rehabilitating its sanitary sewer network in accordance with its 2020 Sewer System Management Plan (SSMP) and to meet the deadlines established in Port Ordinance 4474. The Port's annual budget planning process, adopted as part of the SSMP, includes a 5-Year CIP that provides funding for sanitary sewer projects to address compliance with regulatory requirements and more pressing sanitary sewer projects in advance of the CAWP.

Table 3-4 below shows a list of on-going and planned sanitary sewer rehabilitation projects under the current 5-year CIP plan (fiscal years 2024-28), excluding CIP projects not relevant to the CAWP and completed projects. The index numbers in Table 3-6 correspond to the index number in Table 3-1 in the 2020 SSMP. Figure 3-1 provides a map showing the locations of these on-going sewer rehabilitation projects with the name index numbers. As can be seen in the map, the rehabilitation plans cover nearly the entire Port area. The Outer Harbor area rehabilitation plan has already been completed and all the sewer assets have been self-certified. Howard Terminal is not under an Active Plan due to future re-development that may occur. The Port does not have plans to perform any work in the area controlled by FedEx Corporation.

Table 3-4. Planned Sanitary Sewer System Rehabilitation Projects

2020 SSMP				
Table 3-1				Estimated

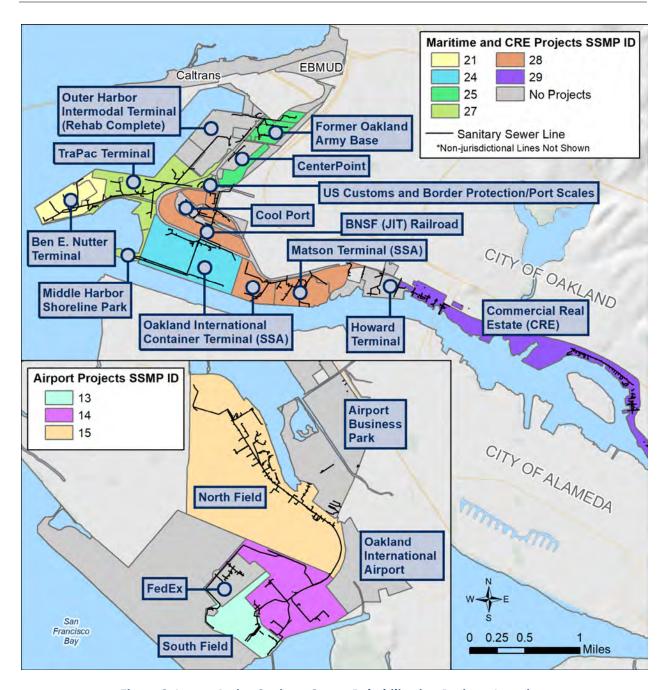

Figure 3-1 Active Sanitary Sewer Rehabilitation Projects Location

The proposed schedule to complete all the corrective actions are included in Appendix C. All corrective actions on Port Controlled Sewer Assets will be completed by 2036. The only known factor currently affecting the CAWP schedule is the potential re-development of Howard Terminal. If re-development does not occur, an Active Plan can then be established for Howard Terminal to complete the work by 2036.

For pipes that are not part of an Active Plan or have not been certified, they will need to be inspected or tested. For typical design-bid-build projects, this process will typically take 12 to 18

months to complete the design, 6 months to complete the bidding process and followed by 12 to 18 months of construction period, for a total project duration of up to four years. The Port will self-certify the pipes as the repair, rehabilitation, and replacements are completed. The flowchart in Figure 3-2 displays the process for each Port Controlled Sewer Asset to achieve the self-certification. The progress of the sewer repair, rehabilitation, and replacement projects along with self-certifications will be tracked by the Port and will be reported on in the Sanitary Sewer Collection System Annual Reports.

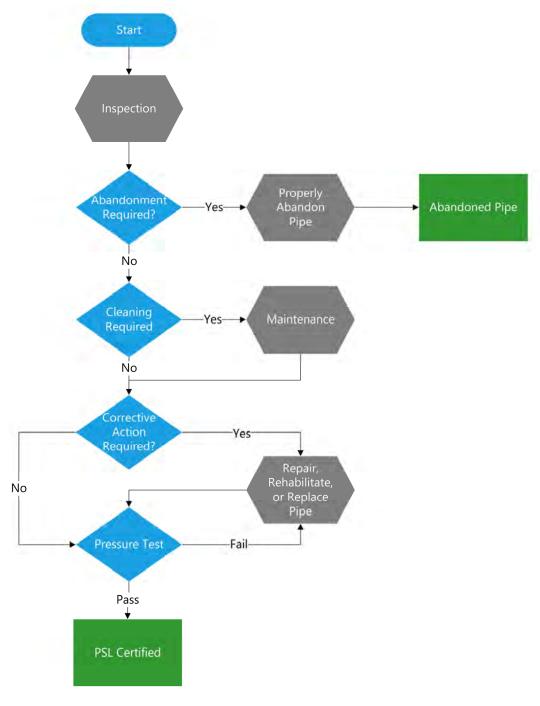

Figure 3-2 Sanitary Sewer Pipes CAWP Implementation Flowchart

3.3 Cost Estimate

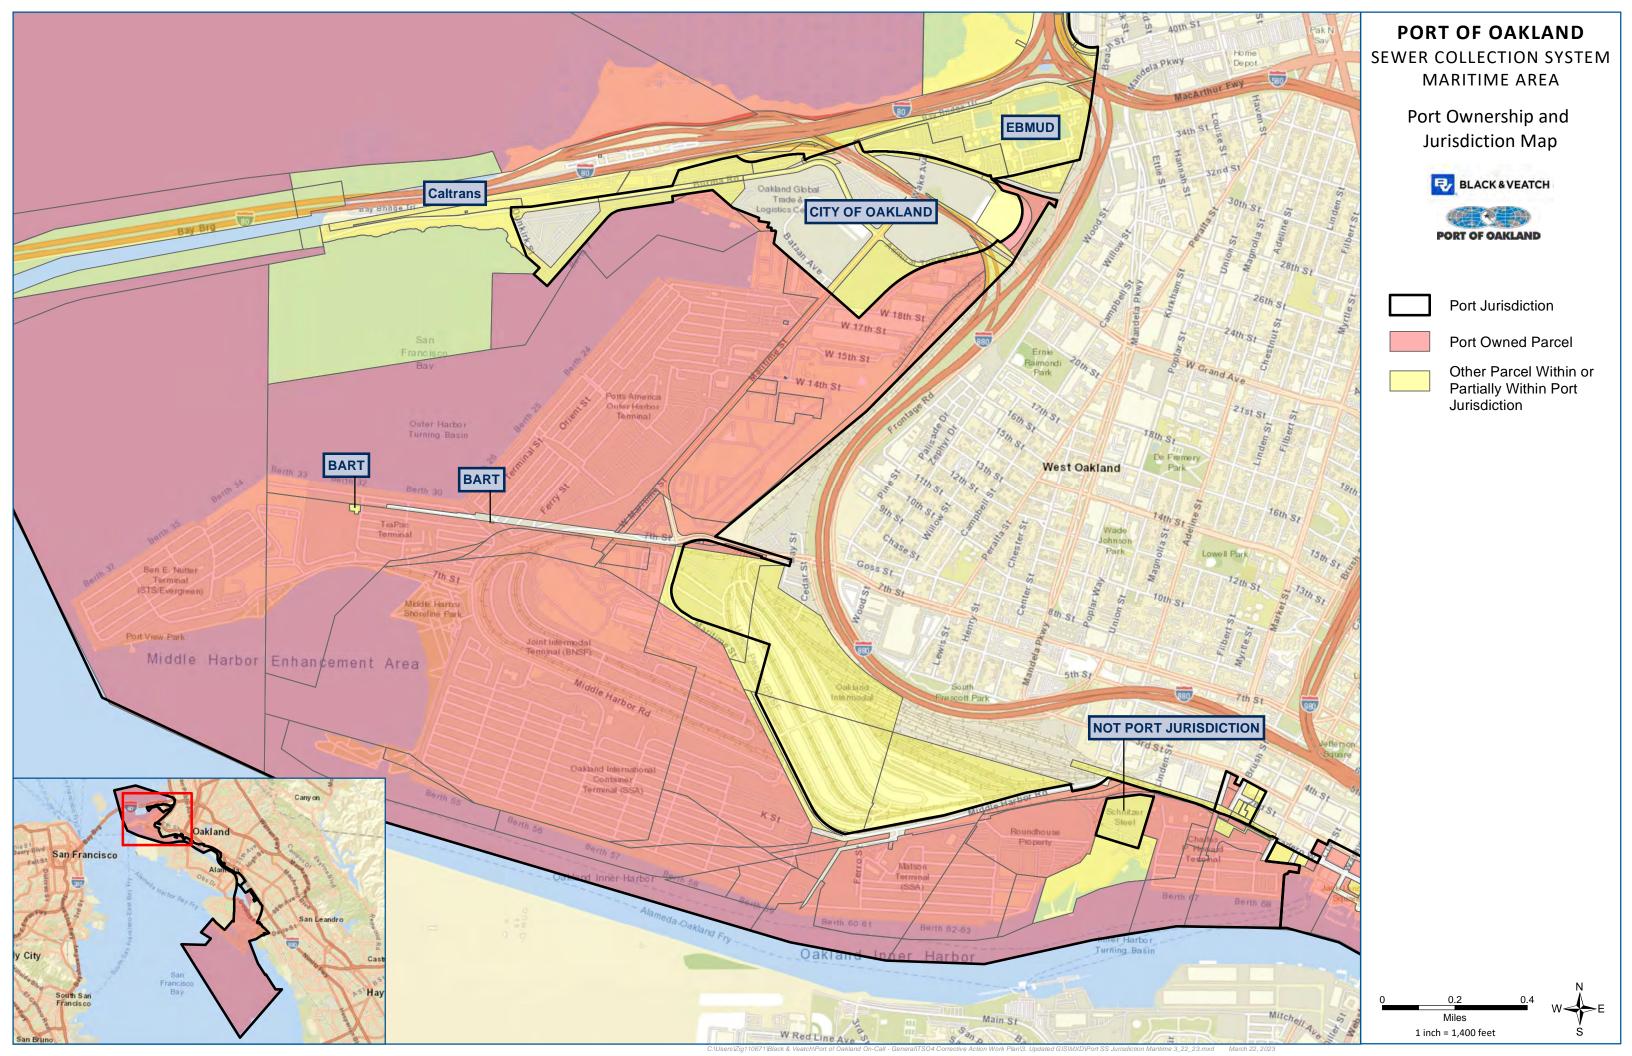

As per EBMUD's guidance, the CAWP shall include a cost estimate for the required work. The current CIP includes a planned budget for all active sewer rehabilitation projects. The total cost of the not yet completed projects in the CIP was estimated to be \$106.5 million and is shown in Table 3-5 below. Costs are subject to change depending on market conditions and the bids received by contractors to do the planned work. This cost estimate does not include self-certifying all Port Controlled Sewer Assets. There are some Port Controlled Sewer Assets that are not part of an Active Plan or have yet to be inspected. There are additional pipes that have been inspected but not self-certified, and may require additional corrective actions that are not captured in the current Active Plans. Costs are expected to be higher to ensure that every Port Controlled Sewer Asset receives a self-certification.

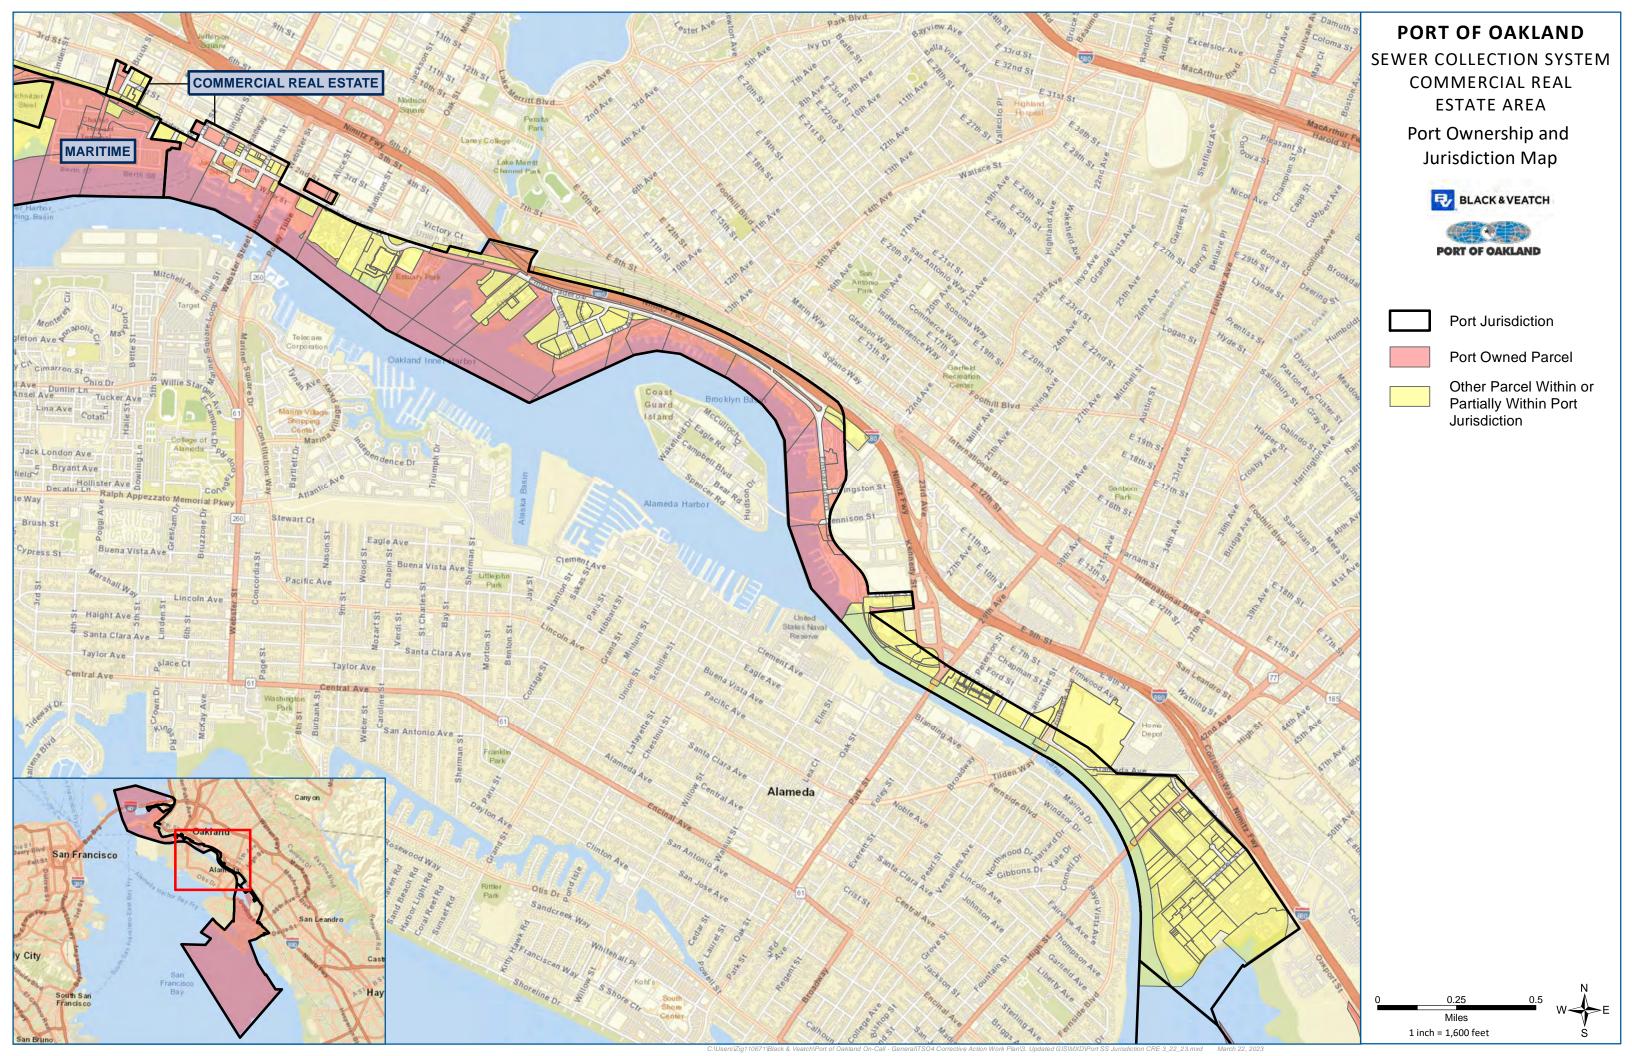

Table 3-5. Summary of Cost Estimate for All Active Sewer Rehabilitation Projects

Appendix D. Sanitary Sewer Maps

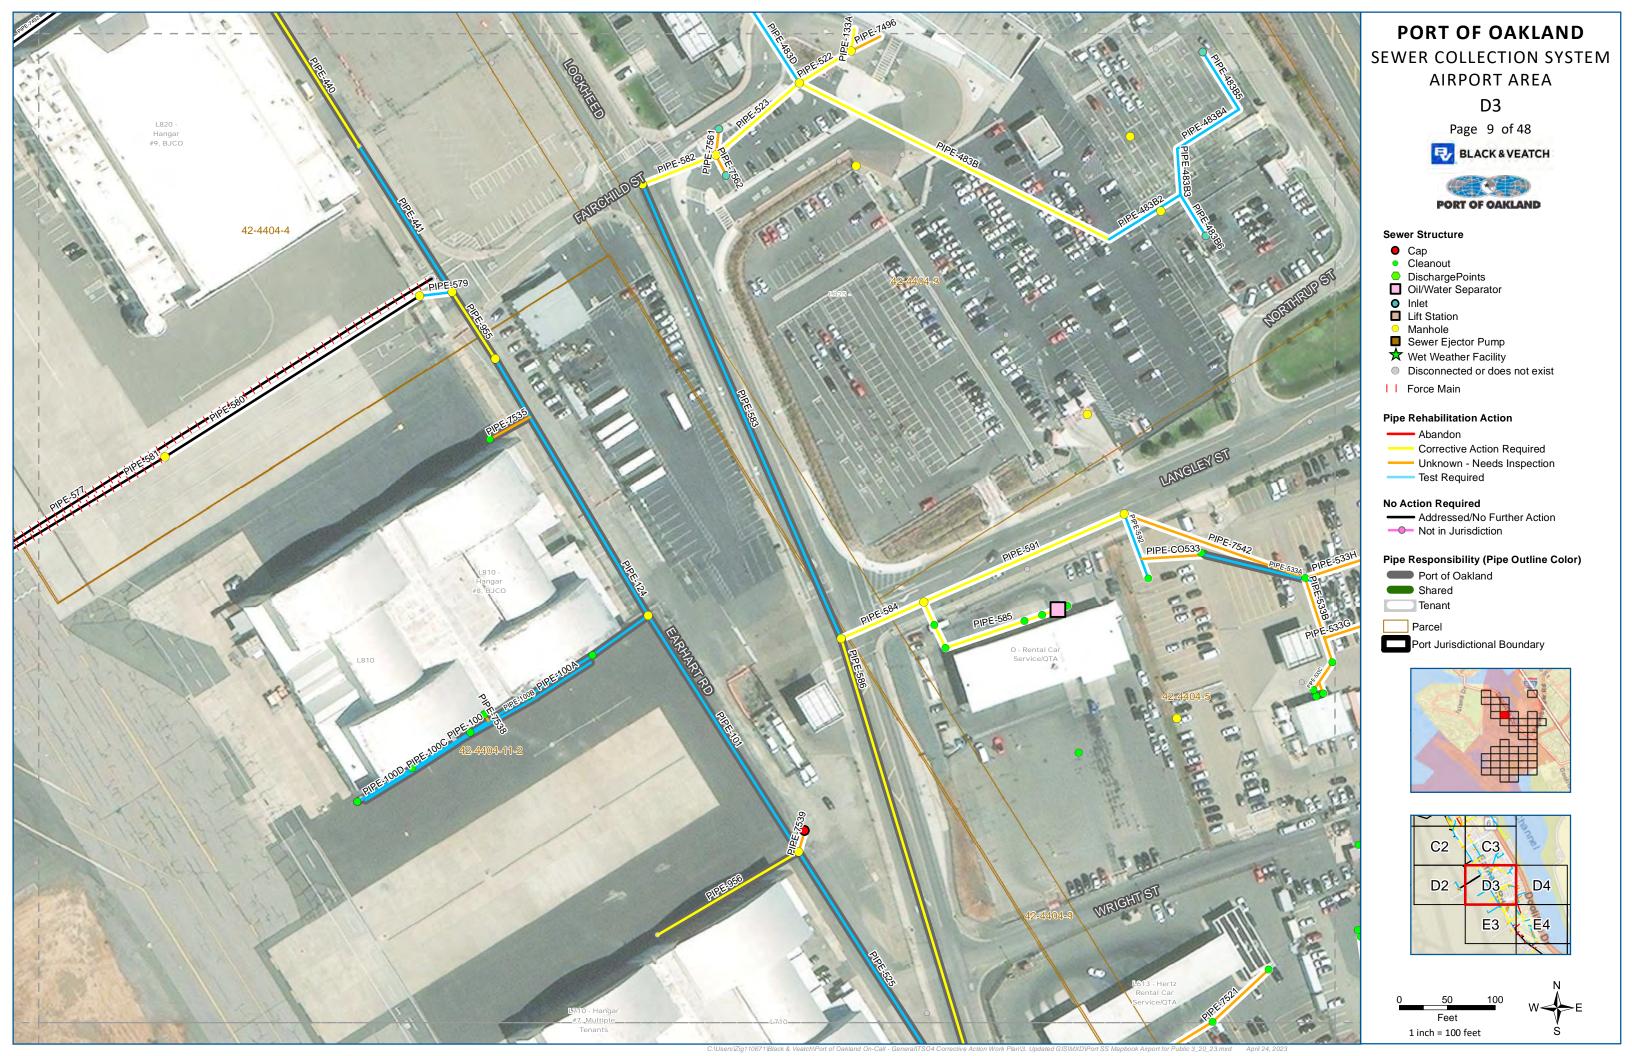

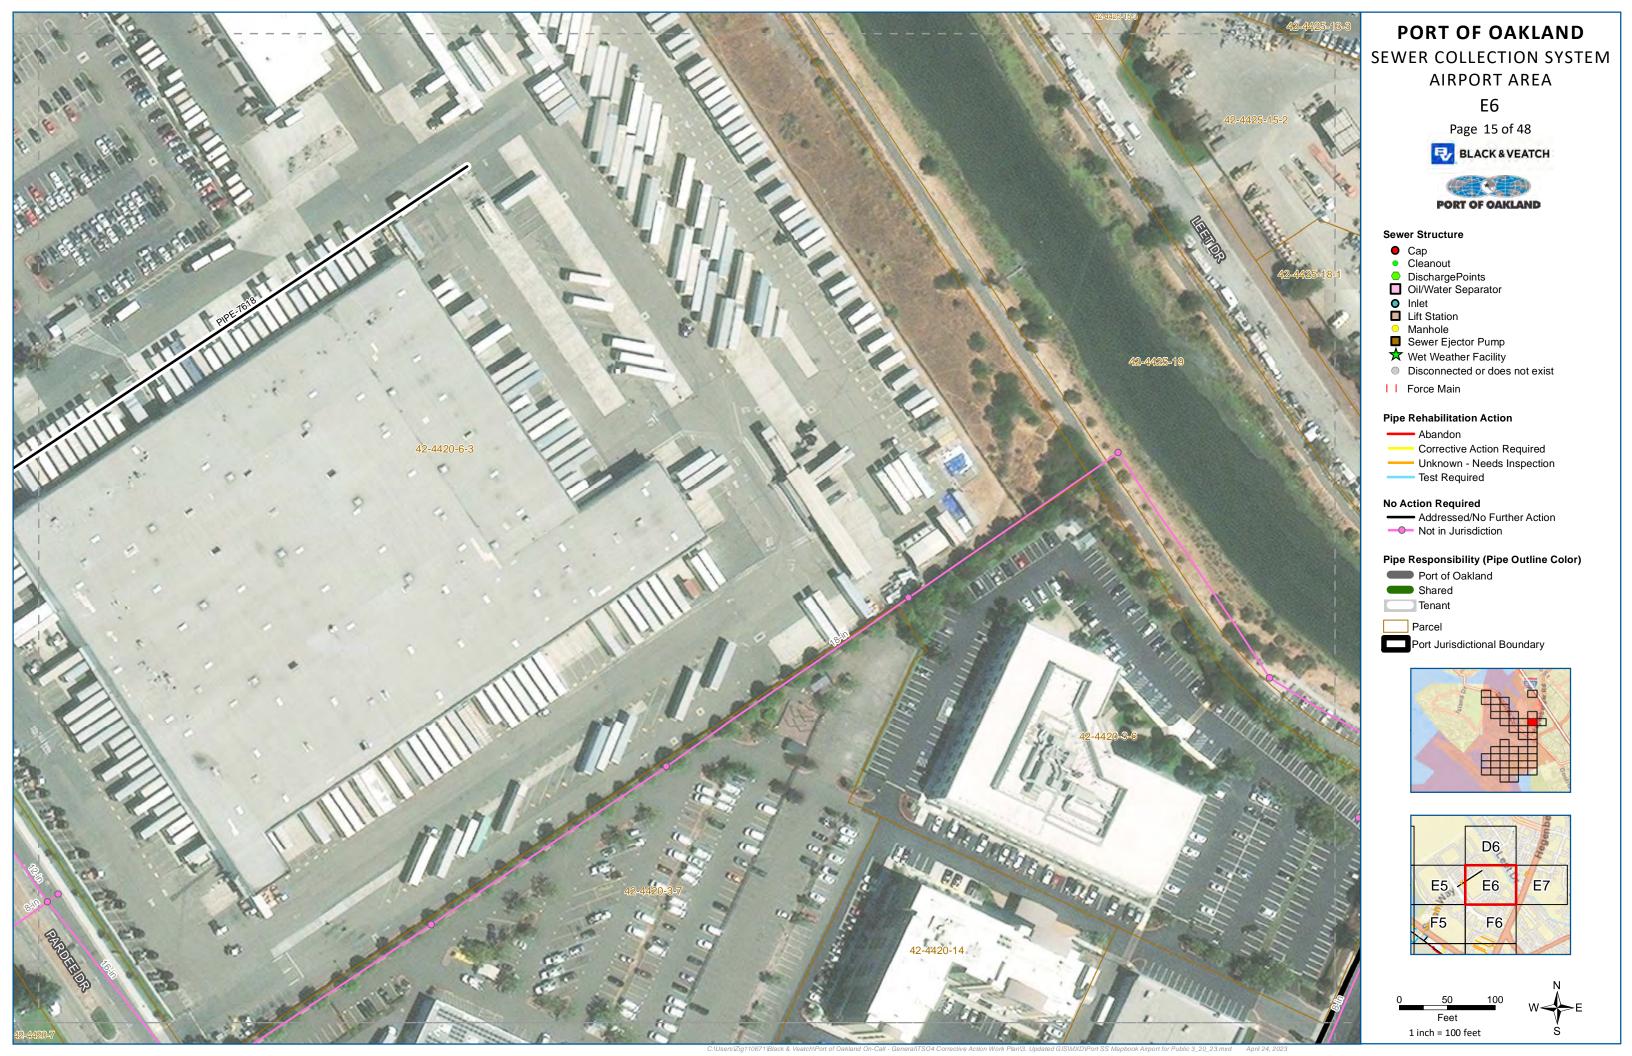

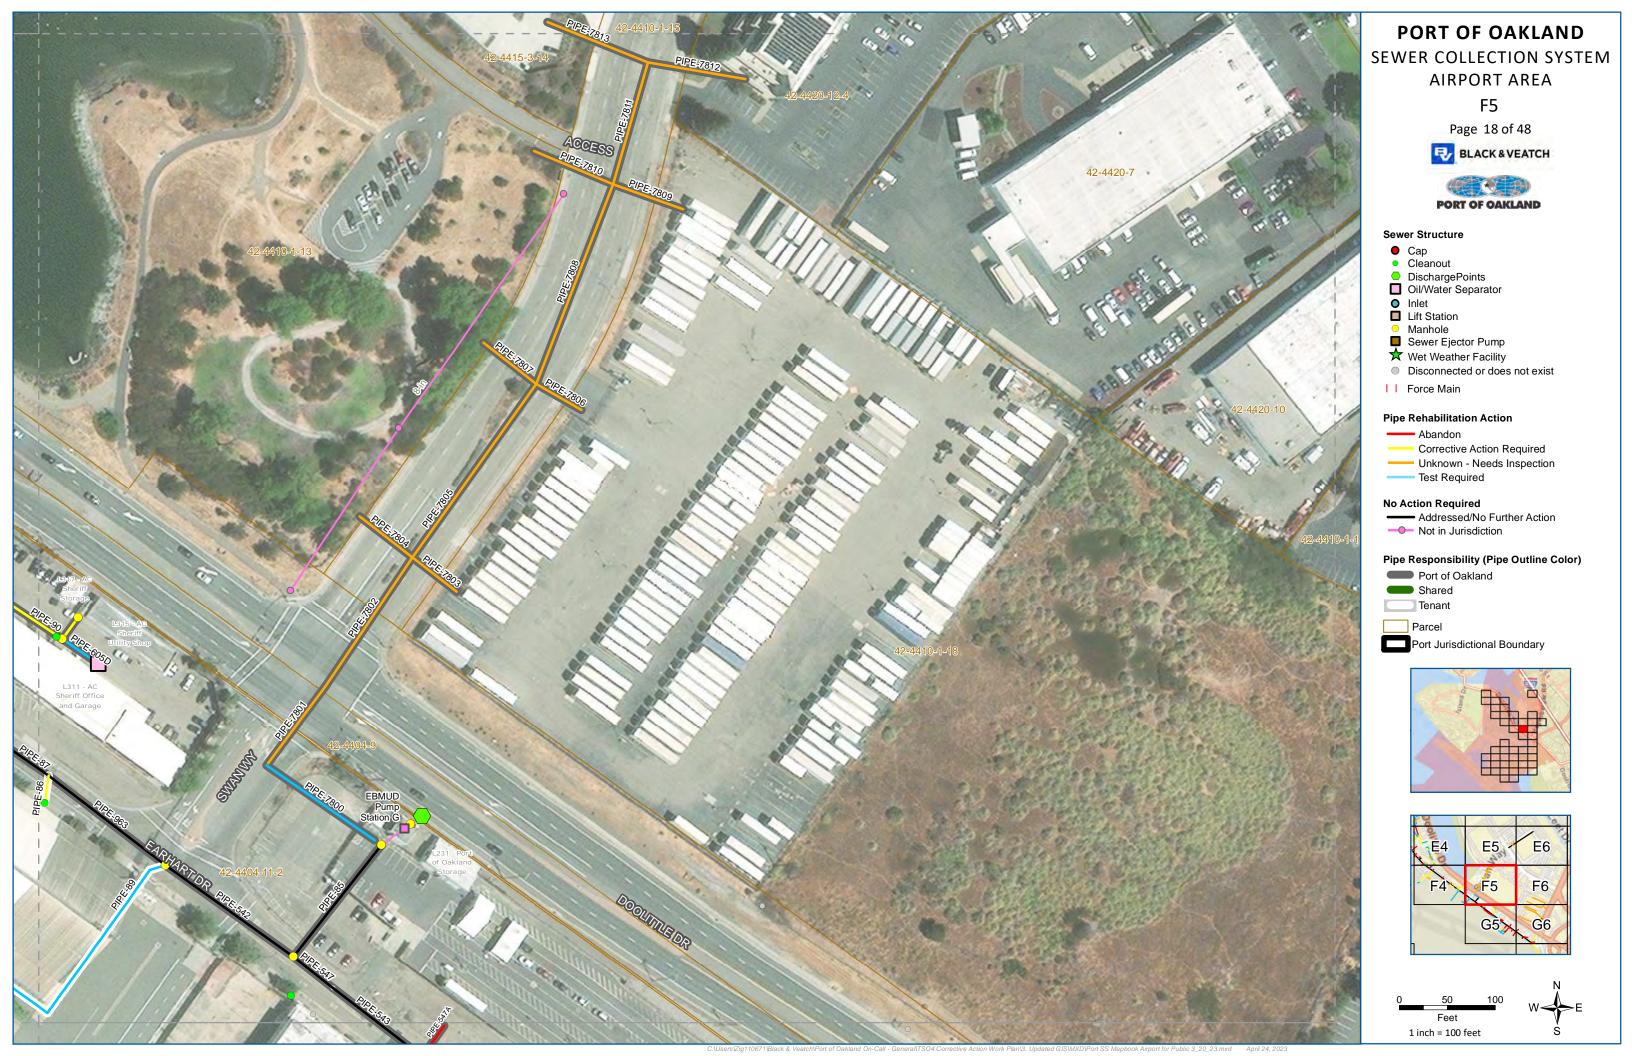

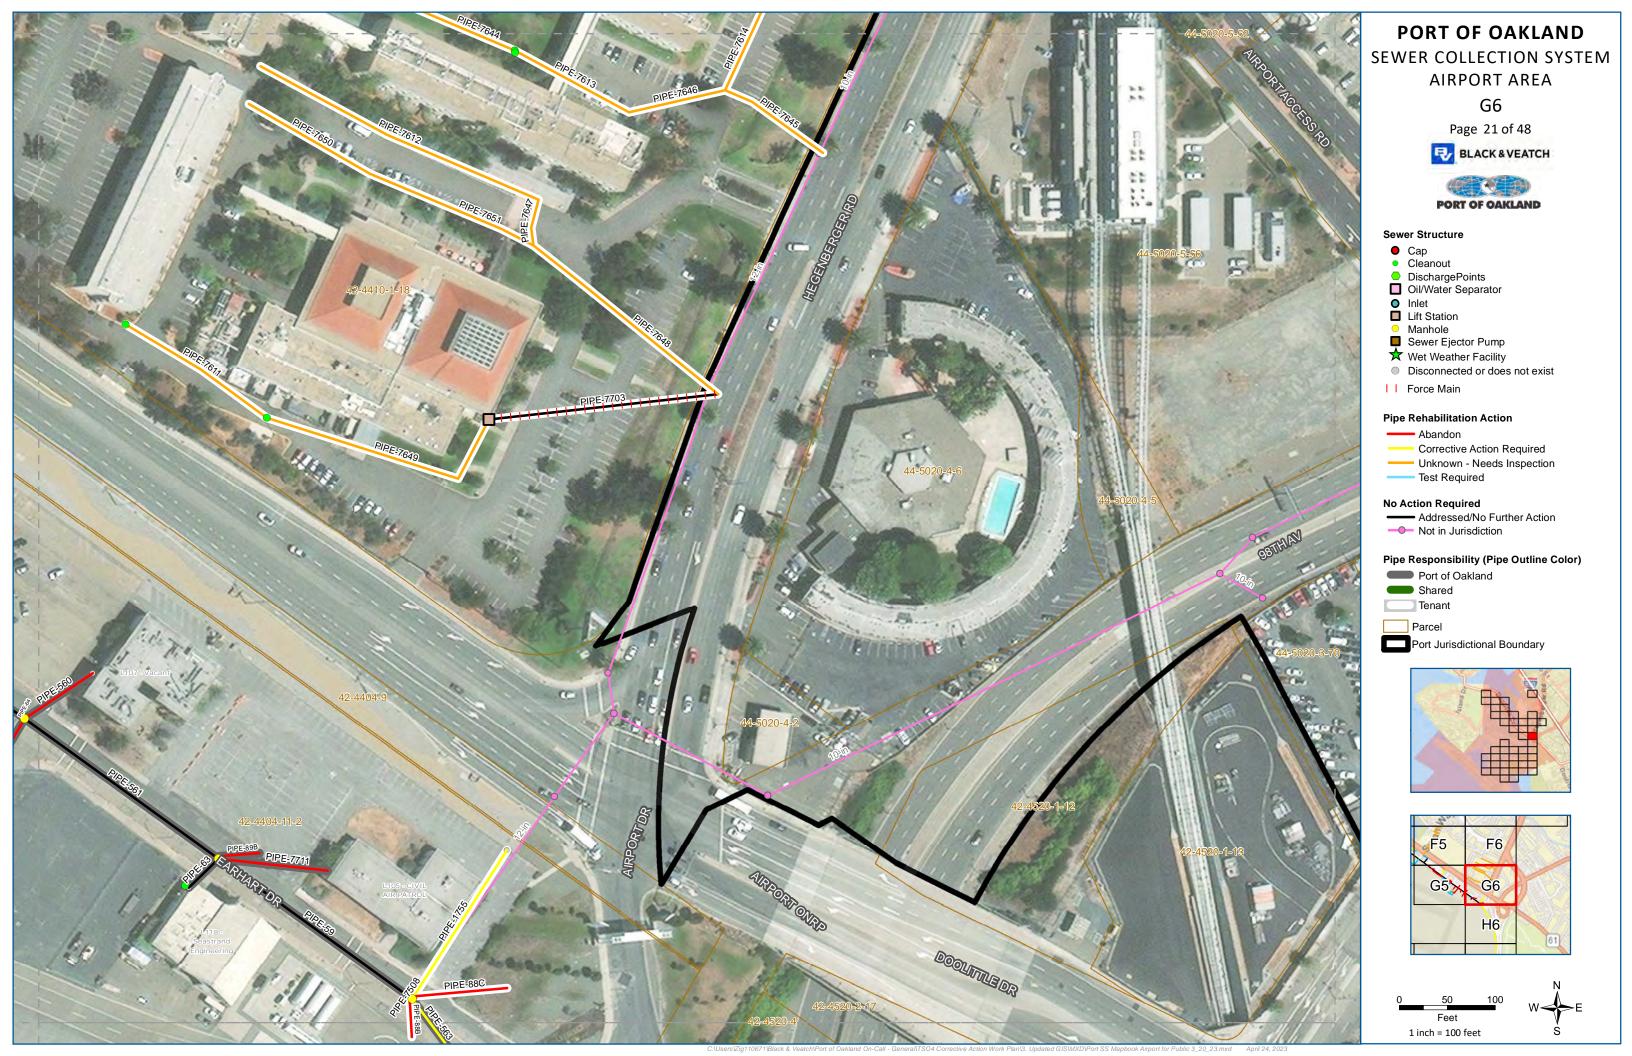

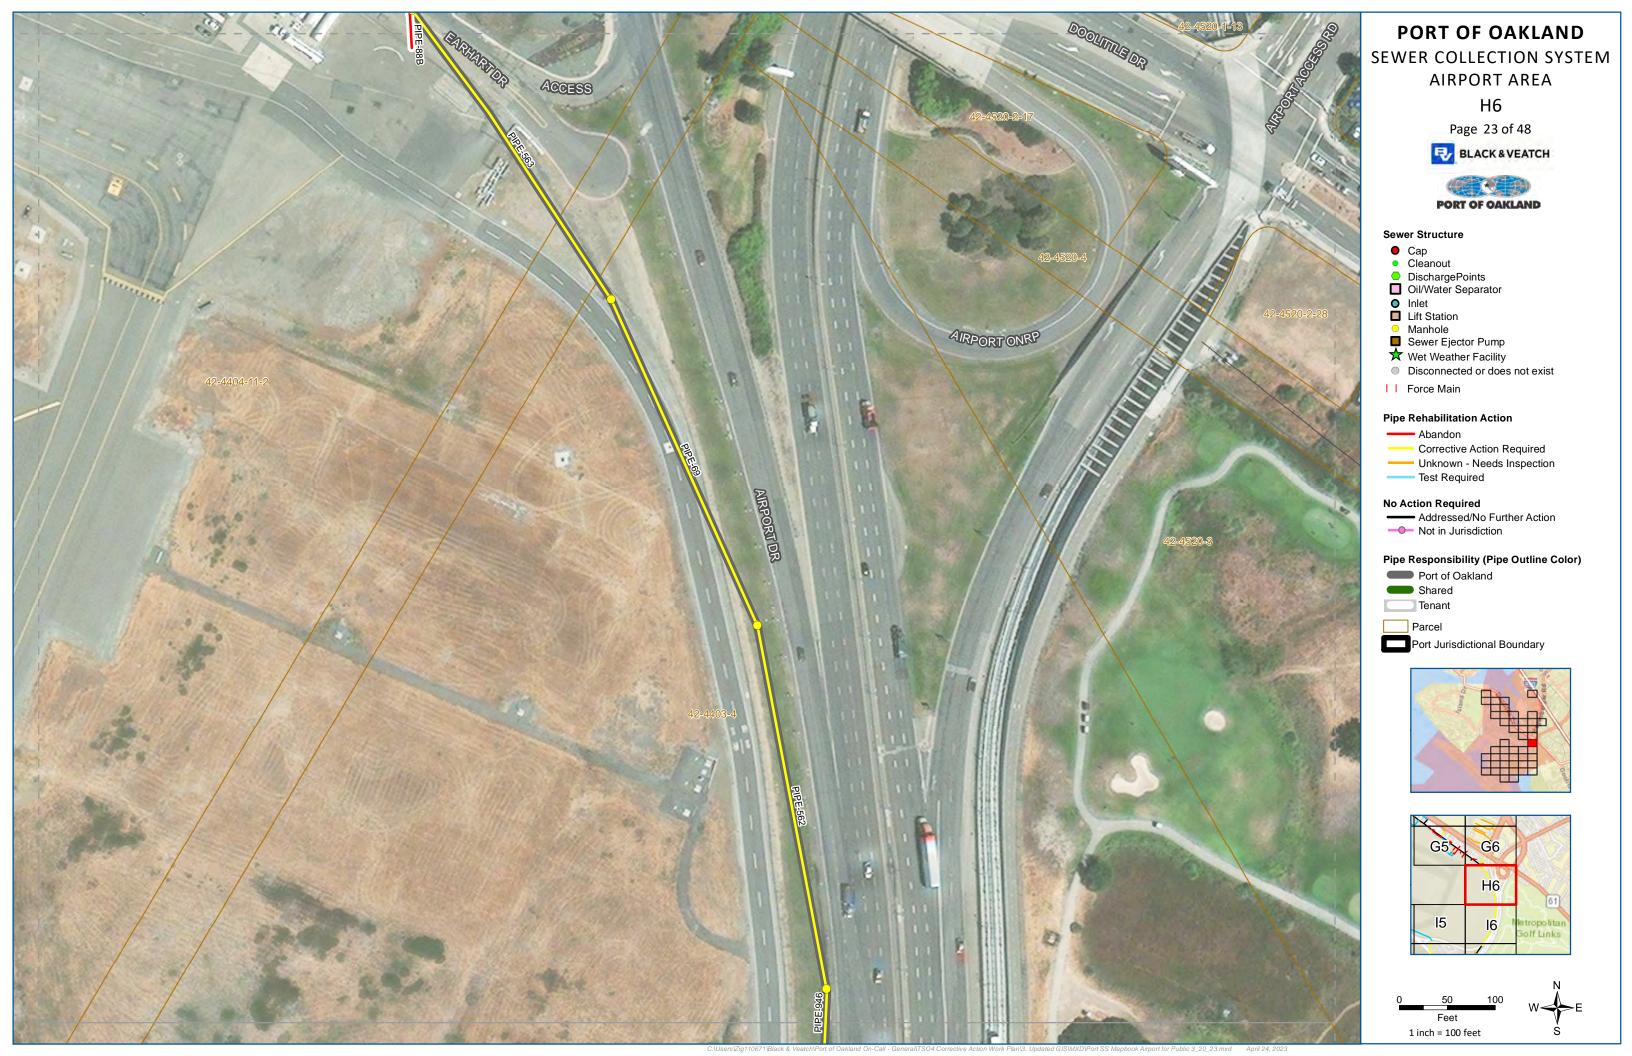

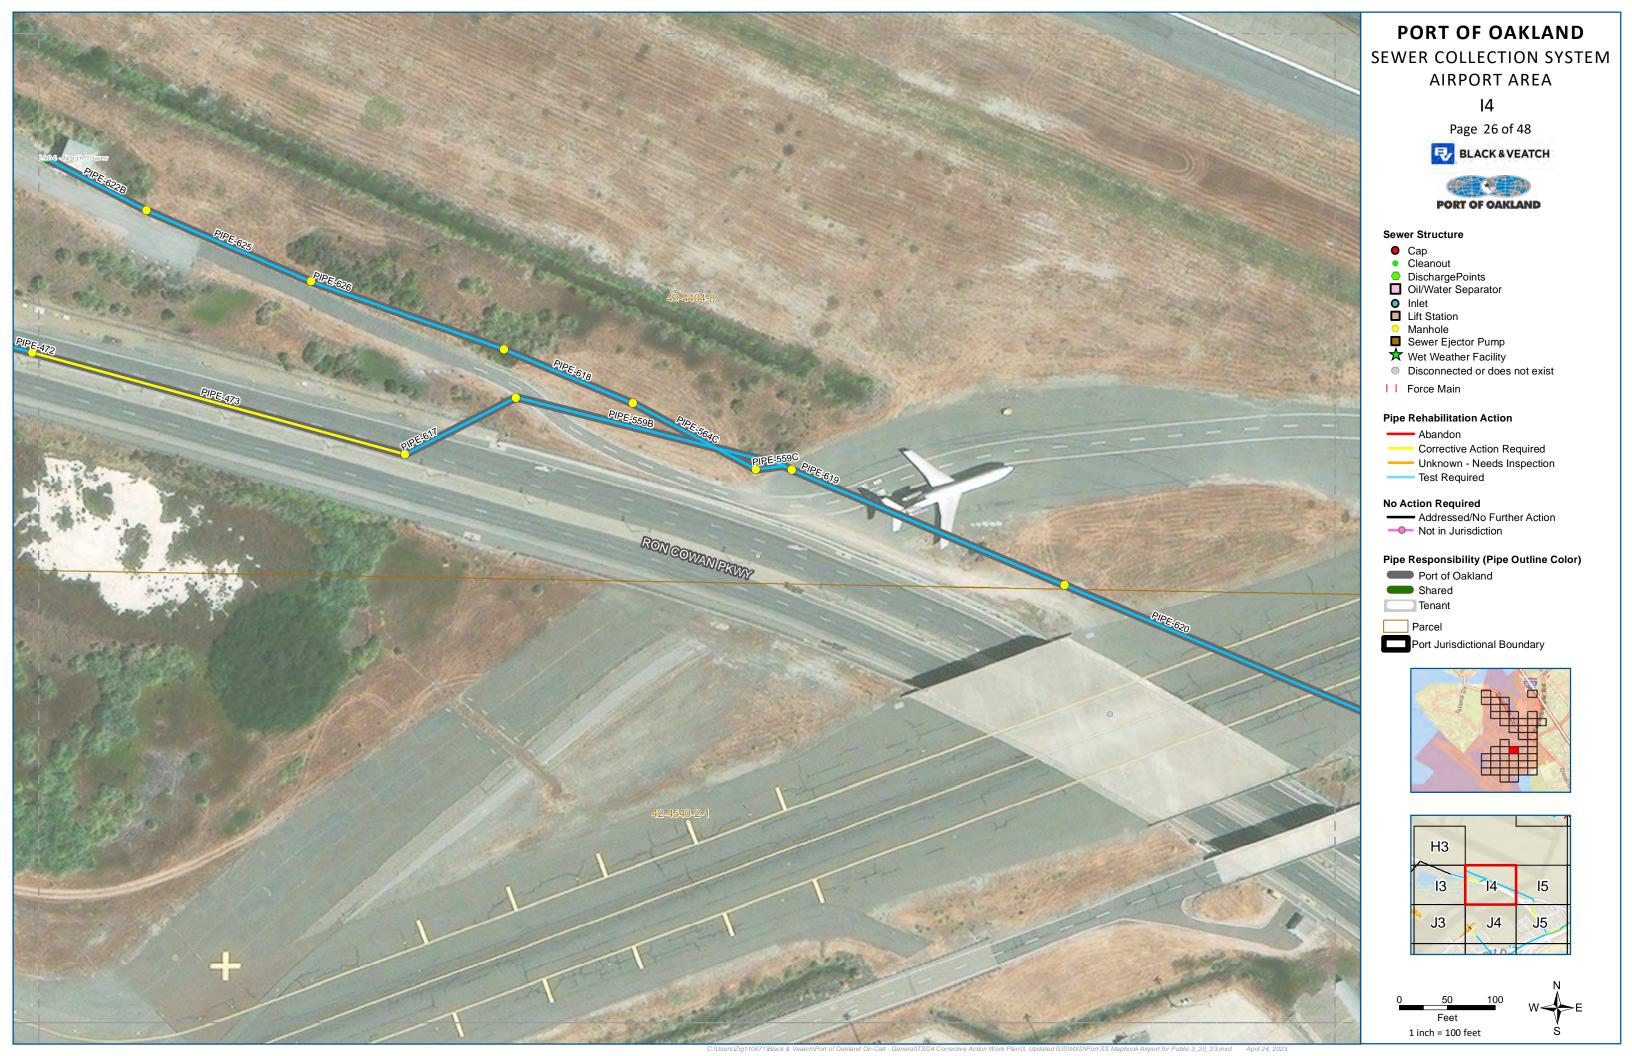

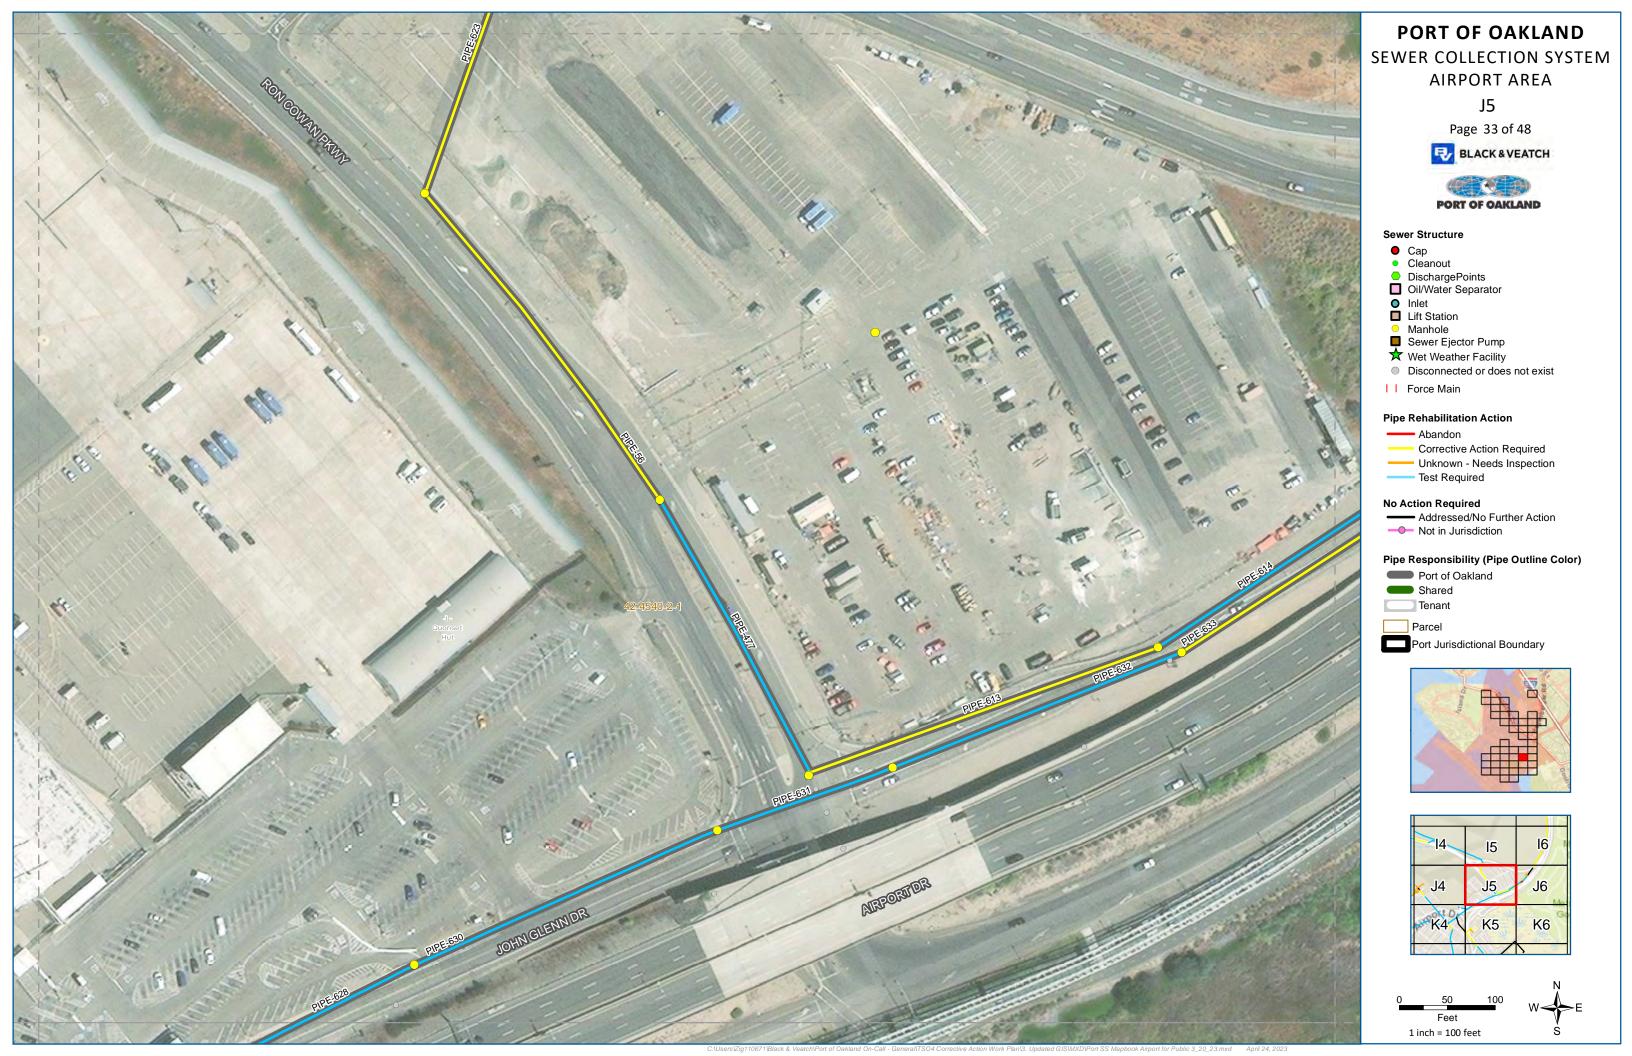

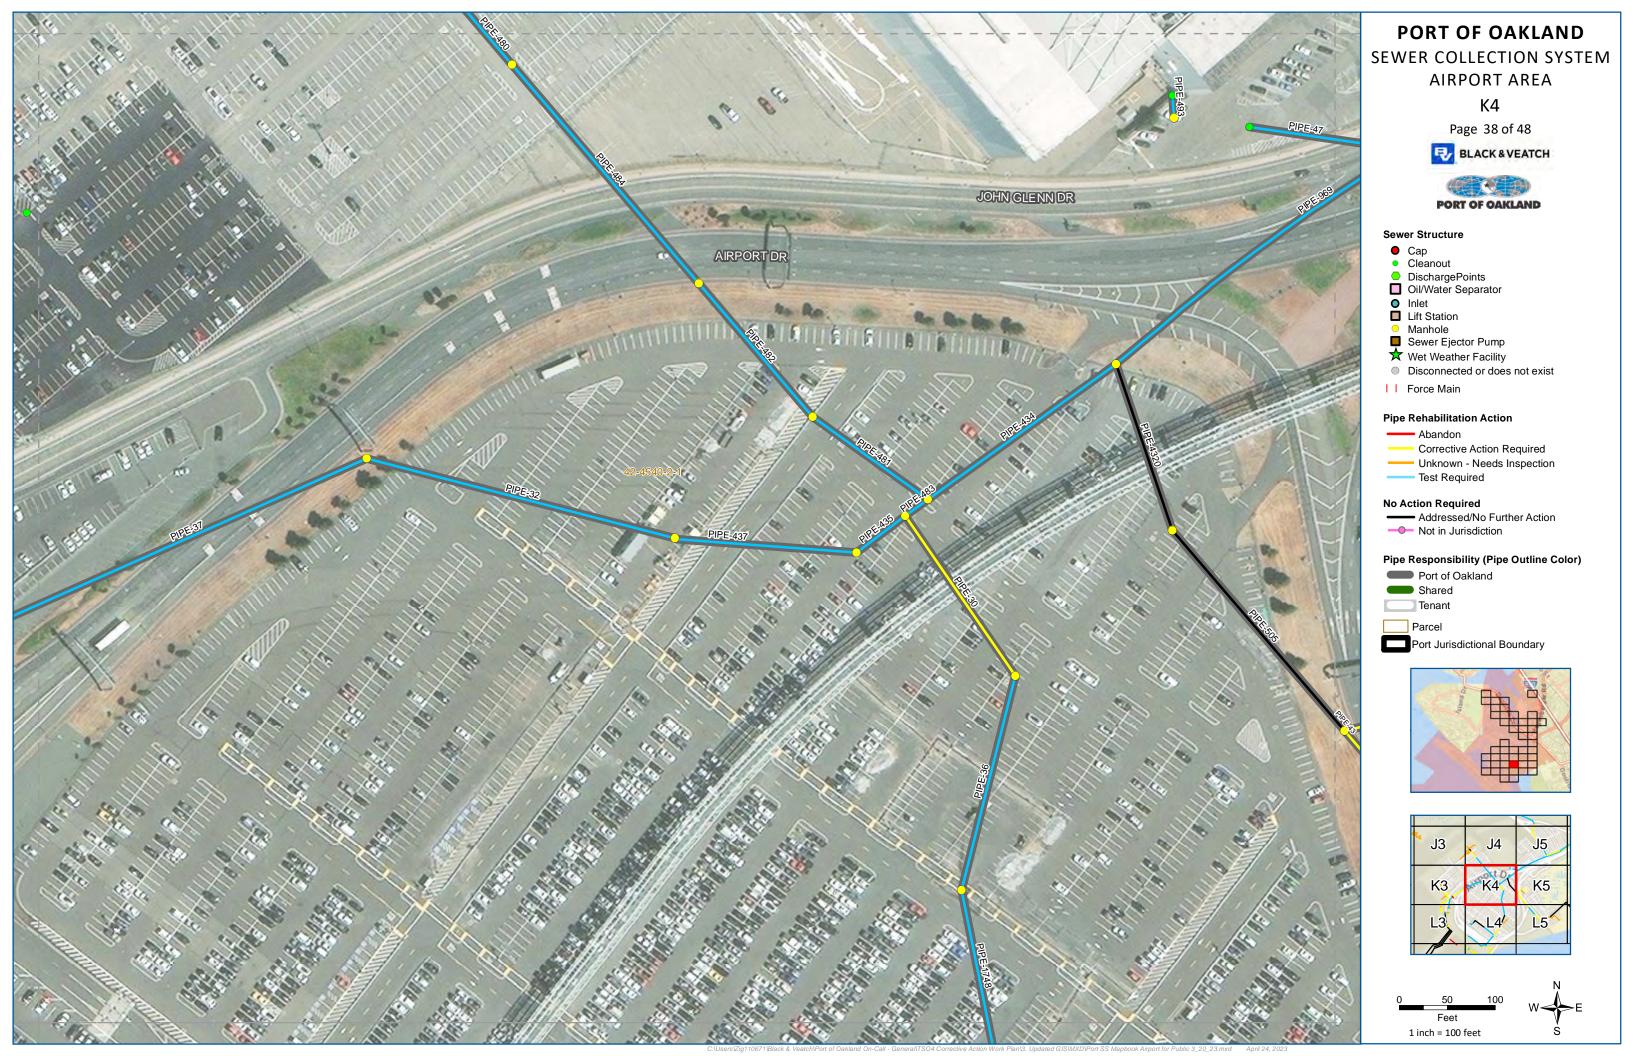

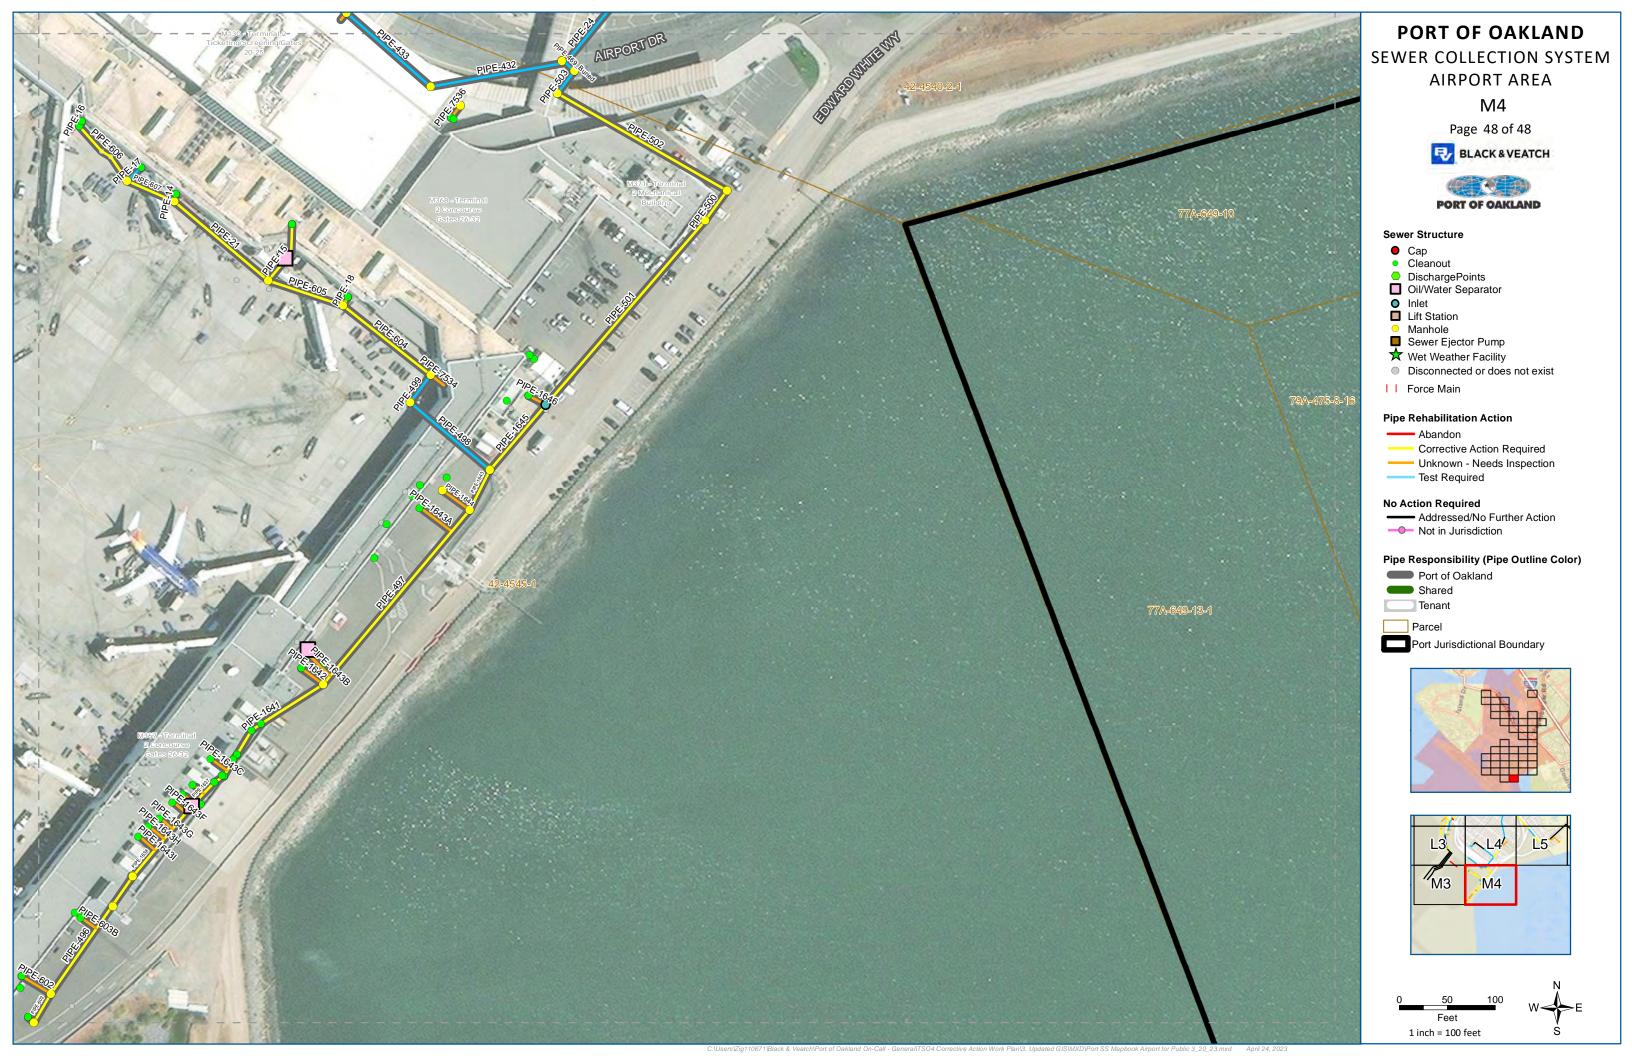

Appendix E. Port of Oakland Ordinance 4474

PORT ORDINANCE NO. 4474

ORDINANCE ADOPTING BY REFERENCE OAKLAND MUNICIPAL AND PLANNING CODES SECTIONS 13.08.590 THROUGH 13.08.620 AS MODIFIED HEREIN, REQUIRING PORT TENANTS TO COMPLY WITH SUCH PRIVATE SEWER LATERAL REGULATIONS, AND DIRECTING PORT STAFF TO PREPARE PLANS TO ASSESS AND REPAIR PORT-OWNED PRIVATE SEWER LATERALS

WHEREAS, in 2009, the United States Environmental Protection Agency ("EPA") and the California State Water Resources Control Board, and the California Regional Water Quality Control Board, San Francisco Bay Region filed lawsuits against the East Bay Municipal Utility District ("EBMUD") and six satellite agencies, including the City of Oakland (the "City"), citing violations of the Clean Water Act and the California Water Code and requesting that defendants fix old, cracked sanitary sewer pipes (the "CWA Lawsuits"). Also in 2009, the EPA filed an Administrative Order against the City directing it to fix the sewer system, including adopting a private sewer lateral program (Docket No. CWA 309(a)-10-009) (the "EPA Administrative Order");

WHEREAS, many pipes in the City are in need of repair to prevent the infiltration of rainwater, which can overwhelm wastewater treatment facilities and lead to the release of partially treated wastewater into the Bay. In response to the CWA Lawsuits and EPA's Administrative Order, EBMUD and the City took several actions to address old sanitary sewer pipes, including phasing in a Regional Private Sewer Lateral ("PSL") Ordinance (the "East Bay Regional Private Sewer Lateral Program"). Under the program, affected property owners must obtain a certificate from EBMUD certifying that all of their PSLs are leak-free and have passed a verification test. Property owners may also choose to have their laterals tested and certified;

WHEREAS on February 9, 2010, EBMUD adopted Ordinance No. 353-10, which amended Ordinance No. 311 by adding Title VIII thereto, establishing the East Bay Regional Private Sewer Lateral Program and enacting regulations for the inspection, testing, repair, replacement, and ongoing maintenance of PSLs within the program area, including the City. EBMUD amended the EBMUD Regional PSL Program on July 23, 2013 (Ordinance No. 359-13), which deleted Title VIII and re-enacted its modified provisions as a new standalone ordinance, and amended Ordinance No. 359-13 again on October 28, 2014 (Ordinance No. 362-14) (Ordinance 359-13 and all existing and future amendments thereto are collectively referred to herein as the "EBMUD Regional PSL Ordinance");

WHEREAS, the EBMUD Regional PSL Ordinance requires "property owners" to obtain a "compliance certificate" upon the happening of certain events including title transfer, construction or remodeling the permitted work cost of which exceeds \$100,000 or change in water services. Under the EBMUD Regional PSL Ordinance, a "property owner" includes "a person that owns a parcel of real property, or that person's representative including a tenant or contractor." A public entity, including the Port is not defined as a property owner for the purposes

WHEREAS, the City has enacted Sections 13.08.590 through 13.08.620 to the Oakland Municipal and Planning Codes ("OMC") by adopting Ordinance No. 13026 and Ordinance No. 13080, respectively (and collectively referred to as the "City PSL Ordinance"), which adopted by reference the EBMUD Regional PSL Ordinance and directed the City's Building Official to enforce the provisions of the EBMUD Regional PSL Ordinance and other City ordinance requirements relating to sewer laterals;

WHEREAS, pursuant to Article VII, Section 706(4) of The Charter of the City of Oakland ("Charter"), the Board of Port Commissioners ("Board" or "Port") has been vested with the complete and exclusive power, and it shall be its duty on behalf of the City to have control and jurisdiction of the "Port Area" (as defined in the Charter), as it may be amended from time to time;

WHEREAS, pursuant to Article VII, Section 706(27) of the Charter, the Board has been vested with the complete and exclusive power, and it shall be its duty on behalf of the City to adopt and enforce such ordinances, orders, regulations and practices as are necessary for the proper administration, management and government of the Port and its facilities; and

WHEREAS, the intent of this ordinance is to: 1) confirm the applicability and enforceability of the City PSL Ordinance, and the EBMUD Regional PSL Ordinance incorporated therein, within the Port Area and on Port-owned property within the City of Oakland as set forth in this ordinance, and 2) to establish a "Local Ordinance Requirement" as defined in the EBMUD Regional PSL Ordinance establishing that Port tenants shall be "property owners" for the purposes of complying with the City PSL Ordinance, and the EBMUD Regional PSL Ordinance incorporated therein, with certain exceptions as outlined herein; now, therefore,

BE IT ORDAINED by the Board of Port Commissioners of the City of Oakland as follows:

Section 1. In acting upon this matter, the Board has exercised its independent judgment based on substantial evidence in the record and adopts and relies upon the facts, data, analysis, and findings set forth in the Agenda Report and in related agenda materials and in testimony received.

Section 2. The Board hereby finds and determines as follows:

A. Keeping Port owned sewer lines free from the infiltration and inflow ("I/I") of storm water and ground water reduces sewer overflows from Port property into surface waters like the San Francisco Bay, which pose a threat to public health, safety and the environment, and to reduce I/I into Port owned sewer lines, the Board finds it necessary and prudent

to adopt this ordinance; and

- В. The proposal to adopt the City PSL Ordinance, and the EBMUD Regional PSL Ordinance incorporated therein, as modified herein and to apply it to the Port Area and all Port owned property in the City of Oakland was reviewed in accordance with the requirements of the California Environmental Quality Act ("CEQA") and the Port CEQA Guidelines. The proposal is categorically exempt from CEQA pursuant to Section 15308 of the Port CEQA Guidelines in that the proposal constitutes a regulatory action taken to assure the maintenance, restoration, enhancement, or protection of environment. Accordingly, the Board hereby finds and determines that the proposal will not have a significant effect on the environment and is therefore exempt from the provisions of CEQA.
- C. The Port has the authority as a property owner acting in its proprietary capacity to regulate certain uses and activities on Port property; and
- D. Charter Section 706(3) requires the Port to "take charge of, control, and supervise ... all the water front properties, and lands adjacent thereto, ... which are now or may hereafter be owned or possessed by the City, and the purpose of this ordinance is consistent with the Port's authority under the Charter Section 706(27) to adopt ordinances and regulations necessary for the proper administration and management of Port facilities.
- E. "Property Owners", as defined in Section 3(A)(3) below, shall be expressly required to obtain a Compliance Certificate from EBMUD as specified in the City PSL Ordinance, and the EBMUD Regional PSL Ordinance incorporated therein, as modified herein.
- Section 3. The Board hereby adopts by reference Oakland Municipal and Planning Codes Sections 13.08.590 through 13.08.620 (Chapter 13.08 of Title 13) and declares those provisions, in particular the EBMUD Regional PSL Ordinance incorporated therein, to be enforceable within the Port, subject to the following additions and modifications:
 - A. For the purpose of this ordinance, the following definitions and clarifications are hereby added:
 - 1. "Leasehold Property" means the property contained within the boundaries of any property lease, assignment agreement, license

and concession agreement, temporary rental agreement, contract or any other tenancy or occupancy agreement between the Port and a tenant (such agreement referred to herein as a "Lease" for purposes of this ordinance) for a property located in the Port Area or on Port property in the City of Oakland, which may include more than one Assessor's Parcel Number or less than a full Assessor's Parcel Number.

- 2. The term "Parcel" as used in the EBMUD Regional PSL Ordinance means, for purposes of implementing this ordinance, the Leasehold Property.
- 3. "Property Owner". In addition to the persons and entities included within the EBMUD Regional PSL Ordinance definition of 'property owner', a 'property owner' also includes any person or party using or occupying any lands or other real property owned by the Port pursuant to any Lease as defined above."
- В. Within the Port Area and on Port-owned property within the City of Oakland, Property Owners, as defined above, shall be responsible for inspecting building sewers, obtaining all required permits, performing all necessary building sewer repair or replacement, scheduling inspections with EBMUD, passing verification test witnessed by EBMUD, obtaining and filing with the City a compliance certificate from EBMUD as set forth in the EBMUD Regional PSL Ordinance for the entire building sewer (upper building sewer lateral and lower building sewer lateral) when one or more of the triggering events in OMC Sections 13.08.600 A, B, or C occurs, except as modified below Leasehold Properties with sanitary totaling greater than 1000 feet in length.
- C. The first sentence of OMC Section 13.08.600 is hereby amended to add the following text at the beginning of the sentence: "Unless otherwise excepted under Sections F and H below,".
- D. Subsection "E" of OMC Section 13.08.600 is amended to read as follows:

"Properties with Sanitary Sewers Totaling Greater than 1000 Feet in Length. Within one year of occurrence of any event specified in Subsection A, B or C of this section [OMC Section 13.08.600], Property Owners of real property or Leasehold Property that contains sanitary sewers totaling greater than 1000 feet in length shall submit for EBMUD approval, a condition assessment plan with a schedule to perform testing to assess the condition of all of the sewer laterals on the property to determine compliance with the EBMUD Regional PSL Ordinance. Within 6 years of triggering compliance requirements, such Property Owners shall complete all condition assessment testing and submit a corrective action work plan for EBMUD approval with a copy to the Port's Director of Engineering.

E. Subsection "H" (Port Exemption) is hereby added to OMC Section 13.08.600 to read as follows:

"(H) Port Exception:

1. A Property Owner may be excepted by written agreement between said Property Owner and the Port by which a party other than the Property Owner, expressly assumes the responsibility for compliance with the City PSL Ordinance, and the EBMUD Regional PSL Ordinance incorporated therein".

Section 4. The Board hereby finds and directs that:

- A. The Port is not a "Property Owner" for the purposes of the EBMUD Regional PSL Ordinance, the City PSL Ordinance or this ordinance. Nonetheless, the Port is committed to participating and furthering the goals of the East Bay Regional Private Sewer Lateral Program.
- Notwithstanding the finding in Section 4.A above, the В. Port will voluntarily proceed where feasible to assess the condition of all Port owned sewer lines on all properties owned by the Port ("Port Controlled Property"), except those sewer lines that are within a Leasehold Property and serve only one tenant. purpose of such assessment will be to determine whether such Port owned sewer lines comply with standards set forth in Section 5 of the EBMUD Regional PSL Ordinance and OMC Section 13.08.610 (collectively, "Compliance Standards"), which for purposes of this ordinance, will apply to all sewer lines assessed by the Port and not, for the avoidance of doubt, only to private sewer laterals. end, the Board directs Port staff to prepare a

"condition assessment plan" for Board approval as soon as feasible, but no later than June 30, 2019. The condition assessment plan will include a schedule for the performance of testing to assess the condition of all Port owned sewer lines on Port Controlled Property.

- implemented C. Port has the Once the condition assessment plan, the Board directs Port staff to prepare a "corrective action work plan" for Board approval which shall describe the type, quantity and schedule of work needed to bring all Port-owned sewer lines on Port Controlled Property into compliance with the Compliance Standards. Port staff shall present such corrective action work plan to the Board no later than June 30, 2023.
- D. After the Board approves the corrective action work plan, the Port shall complete the work described in the approved corrective action work plan, subject to budget appropriations adopted by the Board as part of the Port's capital improvement program or other available sources of funding.

Section 5. The requirements of this ordinance are Local Ordinance Requirements within the meaning of the EBMUD Regional PSL Ordinance. This ordinance is neither intended nor shall it be construed, to alter, or diminish the powers and responsibilities of the Board under the Charter or the Port's practice in the carrying out of its powers and responsibilities.

Section 6. This ordinance shall be effective thirty (30) days after the adoption of this ordinance by the Board.

The Board of Port Commissioners, Oakland, California, April 26, 2018. Passed to print for one day by the following vote: Ayes: Commissioners Colbruno, Cluver, Hamlin, Martinez, Yee and President Story - 6. Excused: Commissioner Butner - 1. Noes: 0.

Daria Edgerly Secretary of the Board
